

## INDEXING DOUBLE BOX RATCHETING WRENCH

The new Indexing Double Box Wrench features an extra-long, forged steel beam with indexing lockable joints at each end, enabling each ratcheting box end to pivot over 180 degrees. With 13 multiple locking positions, this wrench allows technicians to get around obstructions and tight corners, or leave the joint unlocked and use a "pistoning" action to remove or tighten a fastener even more quickly. The indexing double box wrench is available in six metric size combinations including 8 x 10mm, 11 x 12mm, 13 x 14mm, 15 x 16mm, 17 x 18mm and 19 x 21mm and are sold separately or and as a six-piece set.
